

# Surf to Snow Environmental Resource Management

## San Francisco-Oakland Bay Bridge Replacement Biological Monitoring

The California Department of Transportation replaced the eastern span of the San Francisco-Oakland Bay Bridge with a new bridge immediately to the north. S2S is providing biological monitoring support for the phased dismantling of the original span, which includes the implosion of submerged supporting piers. Monitoring includes bird and marine mammal surveys, including species of concern; fish kill observation and collection; and water quality testing.
